

AART

Adrian & Richard's Technologies

Remora™ eCom — Intellectual Property License

Version 1.0 · Effective: May 2026 · aart.dev · licensing@aart.dev

Preamble

This license governs the use, reproduction, and distribution of the **Remora™ eCom** — an electronic commutator (eCom) for slot car racing, developed by AART (Adrian & Richard's Technologies), a collaboration between **Adrian Blakey** and **Richard Lang**, with supporting contributions from **Arseny Vakrushev (ESCAPE32™ firmware)** and **Keith Gibson**. The intellectual property ("IP") is inspired by and structured in the spirit of Creative Commons licensing principles, adapted for hardware and associated documentation.

The manufacturing files (Gerber files, pick-and-place placement files, and Bill of Materials) are freely available for personal non-commercial use. Commercial use requires a separate negotiated license. **By downloading the Remora™ files from the AART GitHub repository you agree to be bound by the terms of this license agreement.** If you do not agree to these terms, you must not download, copy, or use any part of the IP.

Important: AART does not commit to maintaining this repository indefinitely. The repository may be moved, restructured, or discontinued at AART's discretion. The license grant is perpetual and one-time; no ongoing obligation to host or maintain the IP is implied.

1. Definitions

"IP" or "Intellectual Property" means the totality of materials released by AART under this license relating to the Remora™ eCom. The IP falls into two categories:

(a) Licensed Manufacturing Files — the files released specifically to enable the Licensee to manufacture the Remora™ eCom as specified by AART:

- Gerber files (PCB layer outputs for manufacture);
- Pick-and-place placement files (component assembly data);
- Bill of Materials (component list for procurement).

(b) Reference and Support Materials — additional materials provided for context and support, which are not licensed for use as manufacturing inputs:

- The requirements document;
- The test plan;
- The support Wiki and any associated documentation;
- Any additional documents subsequently designated by AART as forming part of this IP.

For the avoidance of doubt, the underlying KiCad schematic and PCB design source files are not publicly released and are not part of the IP licensed hereunder, except to Licensees holding a specific hobbyist or commercial license that expressly includes them.

“**Licensee**” means any individual or entity that downloads, clones, forks, or otherwise obtains the IP.

“**Personal Use Board**” means a physical board manufactured by or for the Licensee for their own personal, non-commercial use, in quantities not exceeding approximately ten (10) units per calendar year.

“**Commercial Board**” means any board manufactured in excess of the Personal Use limit, or manufactured for sale, exchange for value, or commercial distribution, irrespective of quantity.

“**AART**” means Adrian Blakey and Richard Lang, trading as Adrian & Richard’s Technologies, contactable at <https://aart.dev> and licensing@aart.dev.

2. Reverse Engineering

AART acknowledges that it is technically possible to reverse engineer aspects of the Remora™ eCom design from the Licensed Manufacturing Files (Gerbers, BOM, and placement files). However, AART **strongly prefers that you do not reverse engineer the design**, except in the limited circumstances described in this section.

2.1 Permitted Personal Reverse Engineering

Reverse engineering is permitted solely where it is carried out by an individual for their own personal, non-commercial use and exclusively for the purpose of learning and self-education in electronics design. Any knowledge or materials obtained through such reverse engineering must not be used as the basis for a competing product, commercial derivative, or any distribution beyond personal use.

2.2 Hobbyist Reverse Engineering License

If you have a genuine interest in studying the design in greater depth — for example, to understand circuit design techniques or to further your electronics knowledge — AART is happy to provide a **Hobbyist License** explicitly for this purpose. A Hobbyist License may provide access to additional design materials (such as the KiCad source files) and grants a clear, explicit right to study and learn from the design under agreed conditions. To request a Hobbyist License, please get in touch with AART at licensing@aart.dev — we are genuinely pleased to support the curious and the technically minded in the slot car community.

3. License Grant

3.1 Personal Non-Commercial Use

Subject to the terms of this license, AART grants the Licensee a worldwide, royalty-free, perpetual, non-exclusive license to:

- Download, copy, and study the IP;

- Manufacture Personal Use Boards using any manufacturer, including AART's recommended vendor JLCPCB or any other;
- Distribute Personal Use Boards freely (without charge) to friends and family who are slot car racers.

Personal Use Boards must not be sold, exchanged for value, or distributed in commerce. They must be given freely to friends and family only.

3.2 Commercial Use

Any use beyond the Personal Use scope described in Section 3.1 — including but not limited to manufacturing more than approximately ten (10) boards per year, selling boards, or distributing boards commercially — constitutes **Commercial Use** and requires a separate written license agreement with AART.

The standard commercial manufacturing fee is **approximately USD 1.00 per board manufactured** (not per board sold). This fee is due and payable to AART upon receipt of boards from the manufacturer. Prospective commercial licensees must contact AART at <https://aart.dev> or licensing@aart.dev prior to commencing manufacture to obtain remittance instructions and execute a commercial license agreement.

3.3 Registered Charities

Registered charitable organisations wishing to engage in commercial activity involving the IP should contact AART at licensing@aart.dev to negotiate appropriate terms. AART will consider reduced or waived fees on a case-by-case basis.

4. Board Marking Requirements

All marks, logos, symbols, and branding that are embedded in the Gerber files must be **preserved exactly as-is** on every board manufactured under this license. These include the Remora™ product name, the AART™ trademark, and the ESCape32™ logo and trademark. No marks may be removed, obscured, repositioned, or altered in any way.

There are no restrictions on other manufacturing choices, including but not limited to: board colour, solder mask colour, additional graphics, copper weight, surface finish, or board material. Commercial boards may additionally carry the vendor's own logo and branding alongside any preserved AART marks.

5. Support

AART provides community support for the Remora™ eCom IP through the following channels:

- GitHub Wiki (associated with the IP repository);
- Discord (link available at aart.dev);
- Email enquiries via the aart.dev website.

Commercial vendors are solely responsible for providing first-line support for their own products. AART does not undertake any obligation to support commercially manufactured boards or end users of commercial products.

Commercial vendors wishing to engage AART for **second-line support** services should negotiate a separate support agreement with AART at <https://aart.dev>. AART will not provide second-line support to a commercial vendor in the absence of such an agreement.

6. ESCape32 Firmware

6.1 Standard Firmware Build

The Remora™ eCom board ships with, or is intended to run, a specific release of the **ESCape32™ open-source firmware**, maintained in the official ESCape32 GitHub repository. AART identifies and qualifies specific ESCape32 releases for use with the Remora™ eCom and is responsible for the support of that designated build in the context of this board.

The ESCape32™ firmware **will change from time to time** as the upstream project evolves. It is the **board owner's sole responsibility** to monitor these changes and apply firmware updates as appropriate. Updates may be applied by either of the following methods, for which instructions are provided in the board's Wi-Fi interface:

- **Wi-Fi Link:** over-the-air update via the board's plug-in Wi-Fi interface;
- **Reflashing:** direct programming using a USB dongle attached to a computer running suitable flashing software such as PowerWriter™, as described in the Wiki documentation.

6.2 AART Special-Purpose Firmware Builds

From time to time, AART may fork the ESCape32™ firmware and develop a special-purpose build for a specific feature or experimental purpose. Such builds will be distributed within a `bin/` directory in the repository, accompanied by a `README.md` file explaining the build's purpose, intended use, and any known limitations.

Note: AART special-purpose firmware builds are provided with **no guarantee whatsoever**. Their installation and use is entirely at the board owner's own risk. AART accepts no liability for any damage, malfunction, or data loss arising from the use of a special-purpose build. The standard firmware warranty disclaimer in Section 8 applies in full.

7. Intellectual Property

All rights, title, and interest in and to the IP (other than as expressly licensed herein) remain with AART. The Remora™, AART™, and associated marks are trademarks of AART. ESCape32™ is a trademark of its respective owner.

AART makes no representation or warranty that the IP does not infringe the intellectual property rights of any third party. It is the Licensee's sole responsibility to conduct any necessary freedom-to-operate analysis and to obtain any third-party licences that may be required.

8. Disclaimer of Warranties and Limitation of Liability

THE IP IS PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, ACCURACY, COMPLETENESS, OR NON-INFRINGEMENT. AART DOES NOT WARRANT THAT THE DESIGN IS FREE FROM ERRORS OR THAT ITS USE WILL BE UNINTERRUPTED OR SAFE.

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, IN NO EVENT SHALL AART OR ITS CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING BUT NOT LIMITED TO DAMAGE TO PROPERTY, PERSONAL INJURY, DEATH, LOSS OF DATA, OR LOSS OF PROFITS) ARISING OUT OF OR IN CONNECTION WITH THE USE OR INABILITY TO USE THE IP OR ANY BOARD MANUFACTURED THEREFROM, HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT.

The Licensee assumes all risk associated with the design, manufacture, assembly, and operation of any board produced using the IP.

9. Termination

This license is granted perpetually but will terminate automatically upon any material breach by the Licensee that is not remedied within thirty (30) days of written notice from AART. Upon termination, the Licensee must cease all use and distribution of the IP and any boards manufactured under the terminated license.

Personal Use licenses survive in respect of boards already lawfully manufactured prior to termination.

10. Governing Law

This license shall be governed by and construed in accordance with the laws of the jurisdiction in which AART's principal contributors are domiciled, without regard to conflicts of law principles. Any disputes shall be resolved by negotiation in good faith, and if unresolved, by binding arbitration.

11. Miscellaneous

- **Entire Agreement:** This license constitutes the entire agreement between AART and the Licensee with respect to the IP and supersedes all prior representations and understandings.
- **Severability:** If any provision of this license is found to be unenforceable, it shall be modified to the minimum extent necessary to make it enforceable, and the remaining provisions shall continue in full force.
- **No Waiver:** Failure by AART to enforce any provision shall not constitute a waiver of the right to enforce it in the future.
- **Notices:** All notices and requests to AART should be directed to licensing@aart.dev.

Quick Reference Summary

This summary is provided for convenience only and does not form part of the license.

	Personal Use	Commercial Use
Max boards / year	~10	Unlimited (fee applies)
Manufacturer	Any (incl. JLCPCB)	Any
Distribution	Free to friends / family only	Commercial sale permitted
Fee to AART	None	~USD 1.00 per board manufactured
Attribution on board	All Gerber-embedded marks preserved as-is	All Gerber-embedded marks preserved as-is; vendor logo also permitted
AART support	Community (Wiki, Discord, email)	Vendor responsible; 2nd line by agreement
